

WordPress security visibility built around evidence.

Aegisify helps teams understand what is exposed, what changed, what code and components matter, and what should be reviewed next — combining external application testing with authorized WordPress-side context.

Starting from

\$79 / MONTH

Scope varies by site count, users, scanning depth, reporting, and current terms.

WHAT THE PLATFORM CONNECTS

EXTERNAL

Routes, pages, forms, APIs, headers, and reachable application surfaces.

WORDPRESS CONTEXT

Plugins, themes, files, dependencies, configuration, and approved log context.

ACTION

Prioritized findings, evidence-backed review, remediation guidance, retesting, and reporting.

Two visibility planes. One evidence trail.

External application testing shows what can be reached. The Aegisify Audit Agent adds authorized WordPress-side context. Together, they create one assessment workflow with a complete, evidence-based view of risk and change.

HOW IT WORKS

From exposure testing to WordPress-side evidence.

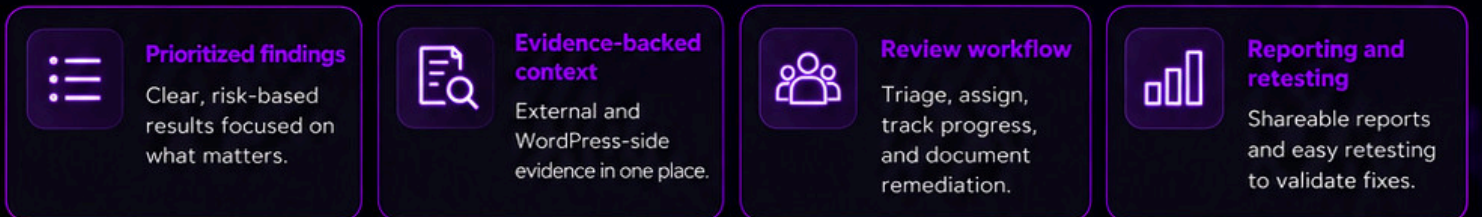

Aegisify combines external application testing with authorized WordPress-side collection so teams can see what is reachable, what changed, and what evidence supports the next action.
