

When prevention may have failed, reconstruct what actually happened.

Digital Intelligence turns monitored application evidence into prioritized investigations, evidence timelines, decision support, and recovery verification — while keeping uncertainty and coverage gaps visible.

CUSTOM QUOTE

Scoped pricing based on your application environment. Ingestion volume, retention, deployment model, and response requirements.

THE DECISION VIEW ANSWERS

01

What is happening now?

02

What is the strongest threat story?

03

How fresh and complete is the evidence?

04

What action is justified next?

OBSERVE

NORMALIZE

CORRELATE

INVESTIGATE

VERIFY

Application events become a decision only after identity, timing, relationships, confidence, and evidence limits are preserved.

INVESTIGATION WORKFLOW

Turn application signals into controlled investigations.

Digital Intelligence preserves identity, timing, relationships, confidence, and evidence limits so teams can investigate incidents with clearer context and better response decisions.

INVESTIGATION WORKFLOW

01

OBSERVE

Collect application activity and available evidence.

02

NORMALIZE

Standardize events and preserve source meaning.

03

CORRELATE

Connect events, users, components, and findings.

04

INVESTIGATE

Build the strongest threat story and decision path.

05

VERIFY

Confirm containment, recovery, and next-step confidence.

BEST-FIT USE CASES

Suspected compromise

Investigate unusual application activity with full context.

High-impact incident review

Reconstruct what happened and validate the scope.

Evidence timeline building

Create accurate, time-aligned timelines across sources.

Coverage gap analysis

Identify missing telemetry and evidence gaps across the environment.

WHAT THE TEAM GETS

Prioritized investigations

Focus on what matters most with clear context and risk.

Evidence timelines

Accurate, normalized timelines with preserved source meaning.

Response decision support

Confident next steps based on complete evidence.

Recovery verification

Validate containment and confirm a return to normal operations.
